

RN42/RN42N Class 2 Bluetooth Module

Features

- Fully qualified Bluetooth® version 2.1 module, supports version 2.1 + Enhanced Data Rate (EDR)
- Backwards-compatible with Bluetooth version 2.0, 1.2, and 1.1
- Postage stamp sized form factor, 13.4 mm x 25.8 mm x 2 mm (RN42) and 13.4 mm x 20 mm x 2 mm (RN42N)
- Low power (26 uA sleep, 3 mA connected, 30 mA transmit)
- UART (SPP or HCI) and USB (HCI only) data connection interfaces.
- Sustained SPP data rates: 240 Kbps (slave), 300 Kbps (master)
- HCI data rates: 1.5 Mbps sustained, 3.0 Mbps burst in HCI mode
- Embedded Bluetooth stack profiles included (requires no host stack): GAP, SDP, RFCOMM, and L2CAP protocols, with SPP and DUN profile support
- Bluetooth SIG certified
- Castellated SMT pads for easy and reliable PCB mounting
- Certifications: FCC, ICS, CE
- Environmentally friendly, RoHS compliant

- Measurement and monitoring systems
- Industrial sensors and controls
- Medical devices
- Computer accessories

Description

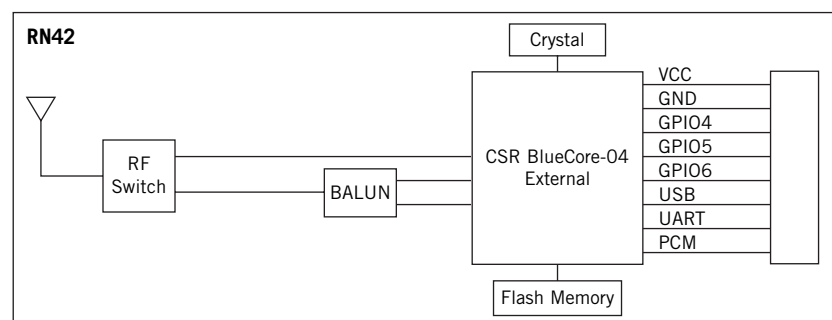

The RN42 is a small form factor, low power, class 2 Bluetooth radio for designer's who want to add wireless capability to their products. The RN42 supports multiple interface protocols, is simple to design in, and is fully certified, making it a complete embedded Bluetooth solution. The RN42 is functionally compatible with the RN 41. With its high-performance, on-chip antenna and support for Bluetooth EDR, the RN42 delivers up to a 3 Mbps data rate for distances up to 20 meters.

The RN42 is also available in a package without an antenna (RN42N). Useful when the application requires an external antenna, the RN42N is shorter in length and has RF pads to route the antenna signal.

Applications

- Cable replacement
- Barcode scanners/readers

Figure 1. RN42 Block Diagram

OVERVIEW

- Baud rate speeds: 1,200 bps up to 921 Kbps, non-standard baud rates can be programmed
- Class 2 radio, 60 feet (20 meters) distance, 4 dBm output transmitter, -80 dBm typical receive sensitivity
- Frequency 2,402 ~ 2,480 MHz
- FHSS/GFSK modulation, 79 channels at 1-MHz intervals
- Secure communications, 128-bit encryption
- Error correction for guaranteed packet delivery
- Configuration via the local UART and over-the-air RF
- Auto-discovery/pairing does not require software configuration (instant cable replacement)
- Auto-connect master, I/O pin (DTR), and character-based trigger modes

The module's moisture sensitivity level (MSL) is 1. Table 1 shows the module's size and weight.

Table 1. Module Size & Weight

| Parameter | RN42 | RN42N | Units |
|-----------|-----------------|---------------|-------|
| Size | 13.4 x 25.8 x 2 | 19 x 13.4 x 2 | mm |
| Weight | 0.045 | 0.040 | Oz. |

Tables 2 through 6 provide detailed specifications for the module.

Table 2. Environmental Conditions

| Parameter | Value |
|-------------------------------|----------------|
| Temperature Range (Operating) | -40° C ~ 85° C |
| Temperature Range (Storage) | -40° C ~ 85° C |
| Relative Humidity (Operating) | ≤ 90% |
| Relative Humidity (Storage) | ≤ 90% |

Table 3. Digital I/O Characteristics

| 3.0 V ≤ VDD ≤ 3.3 V | Min. | Typ. | Max. | Units |
|---|-----------|------|-----------|-------|
| Input Logic Level Low | -0.4 | - | +0.8 | V |
| Input Logic Level High | 0.7 VDD | - | VDD + 0.4 | V |
| Output Logic Level Low | - | - | 0.2 | V |
| Output Logic Level High | VDD - 0.2 | - | - | V |
| All I/O pins (Except reset) Default to Weak Pull Down | +0.2 | +1.0 | +5.0 | uA |

Table 4. Electrical Characteristics

| Parameter | Min. | Typ. | Max. | Units |
|--|------|------|------|-------|
| Supply voltage (DC) | 3.0 | 3.3 | 3.6 | V |
| Average Power Consumption | | | | |
| Radio ON (discovery or inquiry window time), <i>Note (1)</i> | | 40 | | mA |
| Connected Idle (no sniff) | | 25 | | mA |
| Connected Idle (sniff 100 ms) | | 12 | | mA |
| Connected with data transfer | 40 | 45 | 50 | mA |
| Deep sleep idle mode | | 26 | | uA |

Notes:

1. If, in slave mode, there are bursts of radio ON time that vary with the windows. Depending on how you set the windows, that determines your average current.

Table 5. Radio Characteristics

| Parameter | Freq. (GHz) | Min. | Typ. | Max. | Bluetooth Specification | Units |
|--------------------------------------|-------------|------|------|-------|-------------------------|-------|
| Sensitivity at 0.1% BER | 2.402 | - | -80 | -86 | ≤ -70 | dBm |
| | 2.441 | - | -80 | -86 | | dBm |
| | 2.480 | - | -80 | -86 | | dBm |
| RF Transmit Power | 2.402 | 0 | 2 | 4 | ≤ 4 | dBm |
| | 2.441 | 0 | 2 | 4 | | dBm |
| | 2.480 | 0 | 2 | 4 | | dBm |
| Initial Carrier Frequency Tolerance | 2.402 | - | 5 | 75 | 75 | kHz |
| | 2.441 | - | 5 | 75 | | kHz |
| | 2.480 | - | 5 | 75 | | kHz |
| 20dB bandwidth for modulated carrier | | - | 900 | 1,000 | ≤ 1000 | kHz |
| Drift (Five slots packet) | | - | 15 | - | 40 | kHz |
| Drift Rate | | - | 13 | - | 20 | kHz |
| Δf _{1avg} Max Modulation | 2.402 | 140 | 165 | 175 | > 140 | kHz |
| | 2.441 | 140 | 165 | 175 | | kHz |
| | 2.480 | 140 | 165 | 175 | | kHz |
| Δf _{2avg} Min Modulation | 2.402 | 140 | 190 | - | 115 | kHz |
| | 2.441 | 140 | 190 | - | | kHz |
| | 2.480 | 140 | 190 | - | | kHz |

Table 6. Range Characteristics (Approximate Range In Office Environment)

| Range | RN42 |
|-------------------|---------|
| After One Wall | 55 feet |
| After Two Walls | 60 feet |
| After Three Walls | 36 feet |

The readings shown in Table 6 are approximate and may vary depending upon the RF environment. Bluetooth hops in a pseudo-random fashion over the 79 frequencies in the ISM band to adapt to the interference. Data throughput and range vary depending on the RF interference environment.

Figure 2 shows the module's pinout and Table 7 describes the pins.

Figure 2. RN42/RN42N Pinout

Table 7. Pin Description

| Pin | Name | Description | Default | Voltage (V) |
|-----|----------|---|----------------------------------|-------------|
| 1 | GND | Ground | | 0 |
| 2 | SPI_MOSI | Programming only | No Connect | 3 |
| 3 | GPIO6 | Set BT master (high = auto-master mode) | Input to RN42 with weak pulldown | 0 - 3.3 |
| 4 | GPIO7 | Set Baud rate (high = force 9,600, low = 115 K or firmware setting) | Input to RN42 with weak pulldown | 0 - 3.3 |
| 5 | RESET | Active-low reset. Hold low for low-power operation. | Input to RN42 with 1K pullup | |
| 6 | SPI_CLK | Programming only | No Connect | |
| 7 | PCM_CLK | PCM interface | No Connect | |
| 8 | PCM_SYNC | PCM interface | No Connect | |
| 9 | PCM_IN | PCM interface | No Connect | |
| 10 | PCM_OUT | PCM interface | No Connect | |
| 11 | VDD | 3.3-V regulated power input | | |
| 12 | GND | Ground | | |
| 13 | UART_RX | UART receive Input | Input to RN42 | 0 - 3.3 |
| 14 | UART_TX | UART transmit output | High level output from RN42 | 0 - 3.3 |
| 15 | UART_RTS | UART RTS, goes high to disable host transmitter | Low level output from RN42 | 0 - 3.3 |
| 16 | UART_CTS | UART CTS, if set high, disables transmitter | Low level input to RN42 | 0 - 3.3 |
| 17 | USB_D+ | USB port | Pull up 1.5 K when active | 0 - 3.3 |
| 18 | USB_D- | USB port | | 0 - 3.3 |

| Pin | Name | Description | Default | Voltage (V) |
|-------|----------|--|----------------------------------|-------------|
| 19 | GPIO2 | Status, high when connected, low otherwise | Output from RN42 | 0 - 3.3 |
| 20 | GPIO3 | Auto discovery = high | Input to RN42 with weak pulldown | 0 - 3.3 |
| 21 | GPIO5 | Status, toggles based on state, low on connect | Output from RN42 | 0 - 3.3 |
| 22 | GPIO4 | Set factory defaults | Input to RN42 with weak pulldown | 0 - 3.3 |
| 23 | SPI_CSB | Programming only | No Connect | |
| 24 | SPI_MISO | Programming only | No Connect | |
| 25 | GND | Ground for RN42N | | |
| 26 | RF Pad | RF pad for RN42N | | |
| 27-29 | GND | Ground for RN42N | | |
| 30 | AIO0 | Optional analog input | Not Used | |
| 31 | GPIO8 | Status (RF data Rx/Tx) | Output from RN42 | 0 - 3.3 |
| 32 | GPIO9 | I/O | Input to RN42 with weak pulldown | 0 - 3.3 |
| 33 | GPIO10 | I/O (remote DTR signal) | Input to RN42 with weak pulldown | 0 - 3.3 |
| 34 | GPIO11 | I/O (remote RTS signal) | Input to RN42 with weak pulldown | 0 - 3.3 |
| 35 | AIO1 | Optional analog input | Not Used | |

Figure 3 shows the module's physical dimensions.

Figure 3. RN42/RN42N Physical Dimensions

All Dimensions Are In mm

Figure 4 shows a typical application schematic. Because the RN41 and RN42 are functionally compatible, this diagram applies to both modules.

Figure 4. Application Schematic

DESIGN CONCERNS

The following sections provide information on designing with the RN42 module, including radio interference, factory reset, solder reflow profile, connection status, etc.

Reset Circuit

The RN42 contains a 1k pullup to VCC, and the reset polarity is active low. The module's reset pin has an optional power-on-reset circuit with a delay, which should only be required if the input power supply has a very slow ramp or tends to bounce or have instability on power up. Often a microcontroller or embedded CPU I/O is available to generate the reset once power is stable. If not, designers can use one of the many low-cost power supervisor chips currently available, such as the MCP809, MCP102/121, and Torex XC61F.

Factory Reset Using GPIO4

Roving Networks recommends that designers connect the GPIO4 pin to a switch, jumper, or resistor so it can be accessed. This pin can be used to reset the module to its factory default settings, which is critical in situations where the module has been misconfigured. To reset the module to the factory defaults, GPIO4 should be high on power-up and then toggle low, high, low, high with a 1 second wait between the transitions.

Connection Status

GPIO5 is available to drive an LED, and it blinks at various speeds to indicate status (see Table 7). GPIO2 is an output that directly reflects the connection state as shown in Table 8.

Table 8. GPIO5 Status

| GPIO5 Status | Description |
|-----------------|---|
| Toggle at 1 Hz | The module is discoverable and waiting for a connection. |
| Toggle at 10 Hz | The module is in command mode. |
| Low | The module is connected to another device over Bluetooth. |

Table 9. GPIO2 Status

| GPIO2 Status | Description |
|--------------|---|
| High | The module is connected to another device over Bluetooth. |
| Low | The module is not connected over Bluetooth. |

HCI Mode

Roving Networks offers the Host Controller Interface (HCI) mode in addition to the standard operational mode of its Bluetooth modules (standard mode refers to the on-board stack running on the module).

In HCI mode, the on-board stack is bypassed and the module is put in a state that runs the Bluetooth baseband. The HCI provides a command reference interface to the baseband controller and the link manager, and provides access to the hardware status and control registers. This interface provides a uniform method for accessing the Bluetooth baseband capabilities.

In this mode, the Bluetooth stack is no longer on-board the module. It is offloaded to the interfacing host processor. The Bluetooth module is used as a radio, performing the lower level MAC functionalities, while the application stack runs on the host processor.

Using the module in HCI mode allows designers to implement profiles that are not natively supported on the Bluetooth module.

NOTE: HCI mode requires a separate firmware build that must be loaded into the module's flash at the factory. Is not upgradeable in the field.

Roving Networks offers HCI mode in two hardware interfaces:

- HCI over UART (RN42HCI-I/RM)
- HCI over USB (RN42U-I/RM)

HCI over UART

In this mode, the hardware interface between the host processor and the Bluetooth module is the UART. You must interface the flow control signals between the host processor and the Bluetooth module for the HCI interface to work. Failure to do so can cause the host processor and the Bluetooth module to become out of sync and break the Bluetooth link.

HCI over USB

In this mode, the hardware interface between the host processor and the Bluetooth module is the USB. In this architecture, the Bluetooth module is the USB slave and the host processor is the USB host.

Using the USB interface offers the advantage of a faster data link between the Bluetooth module and the host processor. With this architecture, it is possible to achieve Bluetooth's theoretical maximum throughput of 3 Mbps.

Low Power

To achieve low-power operation, hold the module's RESET pin low. With RESET = 0 VDC, the module consumes 35 uA of power. If RESET is left floating or high, the module consumes 3 mA in sleep mode. To obtain the lowest power, the RN42 should be passive (in slave mode and not trying to make connections).

Using the SPI Bus to Upgrade the Flash Memory

While not required, this bus is very useful for configuring the Bluetooth modules' advanced parameters. The bus is required when upgrading the module's firmware. The typical application schematic shown in Figure 4 shows a 6-pin header that can be implemented to gain access to this bus. A minimum-mode version might simply use the SPI signals (4 pins) and obtain ground and VCC from elsewhere in the design.

Minimizing Radio Interference

When laying out the carrier board for the RN42 module, the areas under the antenna and shielding connections should not have surface traces, ground planes, or exposed vias (see Figure 5). For optimal radio performance, the RN42 module's antenna end should protrude at least 5 mm beyond any metal enclosure.

Figure 5. Minimizing Radio Interference

Because the RN42N does not contain an antenna, it does not carry regulatory approvals.

If designers use Roving Networks recommended design, they can file for a permissible antenna change and use Roving Networks' regulatory approvals. The recommended antenna design for the RN42 is a PCB trace antenna. To meet the regulatory compliance information, customers must use the trace pattern shown in Figure 6.

Figure 6. Antenna Trace Pattern

Trace Width Is 20 mil

If designers choose to use another antenna, they must go through the regulatory approval process.

Antenna Design

The pattern from the RF_OUT terminal pad should be designed with 50 ohms impedance and traced with straight lines (see Figure 7). The RF_OUT signal line should not run under or near the RN21 module. The GND plane should be on the side of the PCB to which the module is mounted. GND should be reinforced with through-hole connections and other means to stabilize the electric potential.

Figure 7. Antenna Design

Solder Reflow Profile

The lead-free solder reflow temperature and times are:

- *Temperature*—230° C, 30 - 40 seconds, peak 250° C maximum
- *Preheat temperature*—165° ± 15° C, 90 to 120 seconds
- *Time*—Single pass, one time

COMPLIANCE INFORMATION

Table 10 describes the module's compliance information.

Table 10. Compliance Information

| Category | Country | Standard |
|---------------|-----------------------|-------------------------------------|
| Radio | USA | FCC Part 15 Subpart B: 2008 Class B |
| | | FCC CRF Title 47 Part 15 Subpart C |
| | FCC ID: | T9J-RN42 |
| | Europe | ETSI EN 301 489-1 V1.8.1 |
| | | ETSI EN 301 489-17 V2.1.1 |
| | | ETSI EN 300 328 V1.7.1 |
| | Canada | IC RSS-210 low power comm. device |
| | Certification Number: | 6514A-RN42 |
| EMC | USA | FCC CFR47 Part 15 subclass B |
| | Europe | EN 55022 Class B radiated |
| | | EN61000-4-2 ESD immunity |
| | | EN61000-4-3 radiated field |
| | | EN61000-4-6 RF immunity |
| | | EN61000-4-8 power magnetic immunity |
| Bluetooth | BQB LISTED | B014867- SPP and DUN profiles |
| Environmental | RoHS | RoHS compliant |

ORDERING INFORMATION

Table 11 provides ordering information.

Table 11. Ordering Information

| Part Number | Description |
|---|---|
| RN42-I/RM | Standard application firmware (SPP/DUN master and slave). |
| RN42HCI-I/RM | HCI firmware (HCI over H4 UART). |
| RN42U-I/RM | USB firmware (HCI over USB port). |
| RN42N-I/RM | Standard application firmware (SPP/DUN master and slave) without antenna. |
| For other configurations, contact Roving Networks directly. | |

REVISION HISTORY

Version 2.32r 4/11/2013

- Updated the module part numbers.

Version 2.31r 10/15/2012

- Updated the GPIO5 status table to correctly show that when GPIO5 is low, it indicates that the module is connected to another device over Bluetooth.
- Added information on pins 28 and 29 to the pinout table.
